

**CC-112L**

**Programming Fundamentals**

**Laboratory 07**

**Introduction to Programming, Algorithms and C**

**Version: 1.0.0**

**Release Date: 21-03-2025**

**Department of Information Technology**

**University of the Punjab**

**Lahore, Pakistan**

## **Pre-Lab Contents:**

This section includes all the topics and concepts covered in the lab so far. Students are expected to review these materials before starting new lab activities to ensure a thorough understanding of the subject matter.

## **Learning Objectives:**

- Understand fundamental programming concepts covered in previous lab sessions.
- Reinforce their knowledge of syntax, logic, and problem-solving techniques.
- Develop a clear understanding of programming constructs such as variables, loops, and conditionals.
- Identify and correct common programming errors.
- Improve their ability to write, debug, and optimize code efficiently.
- Strengthen logical thinking and algorithm development skills.

## **Resources Required:**

- Desktop Computer or Laptop
- Microsoft ® Visual Studio 2022

## **General Instructions:**

- In this Lab, you are **NOT** allowed to discuss your solution with your colleagues, even not allowed to ask how is s/he doing, this may result in negative marking. You can **ONLY** discuss with your Teaching Assistants (TAs) or Lab Instructor.
- Your TAs will be available in the Lab for your help. Alternatively, you can send your queries via email to one of the followings.

<b>Teachers:</b>		
Course Instructor	Hafiz Anzar Ahmad	<a href="mailto:anzar@pucit.edu.pk">anzar@pucit.edu.pk</a>
Teacher Assistants	Manahil	<a href="mailto:Bitf21m002@pucit.edu.pk">Bitf21m002@pucit.edu.pk</a>
	Maheen Fatima	<a href="mailto:Bitf22m031@pucit.edu.pk">Bitf22m031@pucit.edu.pk</a>
	Rimsha Majeed	<a href="mailto:Bitf22m029@pucit.edu.pk">Bitf22m029@pucit.edu.pk</a>
	Momna Muzaffar	<a href="mailto:Bcsf22m021@pucit.edu.pk">Bcsf22m021@pucit.edu.pk</a>
	Zainab Mehmood	<a href="mailto:Bcsf22m038@pucit.edu.pk">Bcsf22m038@pucit.edu.pk</a>
	Khadija tul Kubra	<a href="mailto:Bitf22m025@pucit.edu.pk">Bitf22m025@pucit.edu.pk</a>
	Inam ul Haq	<a href="mailto:Bitf22m017@pucit.edu.pk">Bitf22m017@pucit.edu.pk</a>
	M. Saad	<a href="mailto:Bitf23m003@pucit.edu.pk">Bitf23m003@pucit.edu.pk</a>
	Saqib	<a href="mailto:bcsf22m016@pucit.edu.pk">bcsf22m016@pucit.edu.pk</a>
	Subhan	<a href="mailto:bcsf22m043@pucit.edu.pk">bcsf22m043@pucit.edu.pk</a>

### 1.Sum of Digits

---

Write a function to calculate the sum of the digits of a given positive integer.

```
Enter a positive integer: 53
Sum of digits: 8
```

### 2. Reverse Digits

---

Write a function to reverse the digits of a given number.

```
Enter a positive integer: 123
Reversed number: 321
```

### 3.Palindrome Check

---

Write a function to check if a given number is a palindrome (reads the same forward and backward).

**For Example:**

12321 is palindrome

12346 is not palindrome

```
Enter a positive integer: 121
121 is a palindrome.
```

### 4.Factorial Calculation (Iteration)

---

Write a function to calculate the factorial of a given number using iteration.

**For Example:**

Factorial of 5 =  $5! = 1*2*3*4*5 = 120$

Factorial of 3 =  $3! = 3*2*1 = 6$

```
Enter a non-negative integer: 3
Factorial of 3 is 6
```

### 5.Strong Number Check

---

A strong number is a number where the sum of the factorial of its digits equals the number itself.

Write a function to check if a number is a strong number.

**For Example:**

$1! + 4! + 5! = 145$

```
Enter a positive integer: 145
145 is a Strong Number.
```

### *6.Binary-Decimal Conversion*

---

Write functions to:

- Convert a binary number (given as an integer) to decimal.
- Convert a decimal number to binary.

```
Enter a binary number: 10
Decimal equivalent: 2
Enter a decimal number: 2
Binary equivalent: 10
```

### *7.Custom Implementations of Built-in Functions*

---

Write implementations for the following built-in functions and test them in a menu-driven program:

- `double sqrt(double x);` → **Square root function**
- `double fabs(double x);` → **Absolute value function**
- `double ceil(double x);` → **Ceiling function (smallest integer greater than or equal to x)**

#### **Sample Output**

```
Enter a number for square root: 25
Square root of 25.0000 is 5.0000
```

```
Enter a number for absolute value: -3.6
Absolute value of -3.6000 is 3.6000
```

```
Enter a number for ceiling: 4.2
Ceiling of 4.2000 is 5.0000
```

### *8.Random Number Generation*

---

Write functions to:

- Generate a random number between a given range [**low**, **high**].
- Generate a random even number between **low** and **high**.
- Generate a random number in a given range [**low**, **high**] that is a **multiple of N**.

```
Enter low and high values: 1 10
Random number between 1 and 10: 2
Random even number between 1 and 10: 10
Enter a number N: 5
Random multiple of 5 between 1 and 10: 5
```
